## QUALIFICATION OF TRUST SERVICE PROVIDERS

In order to facilitate access of administration<sup>1</sup> and national critical operators<sup>2</sup> to highly efficient and trust cybersecurity and cyberdefence services, France has established a challenging and efficient process allowing the qualification of “trust service providers”.

Based on the savoir-faire of expert qualification bodies accredited by COFRAC<sup>3</sup> and licensed by ANSSI<sup>4</sup>, a rigorous evaluation process allows the qualification of candidate providers meeting the adequate security requirements. Candidate providers can apply for one or all services covered within the scope of the evaluation.

As of today, several trust service providers for IT security audits – listed below – have already been qualified while several others are being evaluated.

While their technical requirements are currently being elaborated, including via public consultations, qualified trust service providers for incident detection, incident response and Cloud will be soon available on ANSSI’s website.

These new cybersecurity and cyberdefence qualified trust service providers adds up to the existing catalogue of historical trust services which have been supporting the development of e-government in France, such as electronic certification or timestamping.

All information on qualified trust service providers are available in French on ANSSI’s website:
